

BPIPE WALL

Wall Sconces

TYPE:

PROJECT NAME:

design by David Dolcini

Bpipe is a light system which originated from a technical solution based on bending and cutting pipes. Its clear and elegant design, based on the pure shape of cylinder, allows to create a wide range of lamps: hang, wall, table and floor lamps; but also other possible solutions may be realized. The light of bpipe plays with the shape of the lamp designing emotional lines inside the architectonic volumes, and underlining at the same time the cuts along the bodies of the lamp.
