

SKYE

SUSPENSION

TYPE:

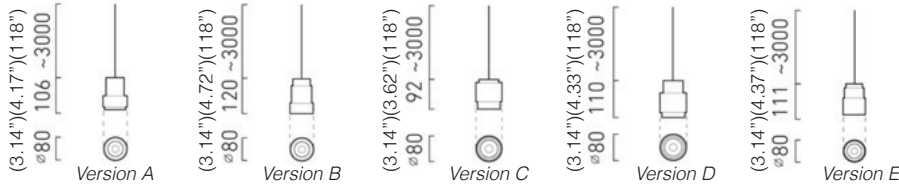

PROJECT NAME:

SUSPENDED

Our line of suspended luminaires named Skye is a play of various diameters of rings which makes the luminaire look light while letting it change its shape. It was designed by the designer Fabian Baumann from the Berlin based Formford studio. Its curious design, various ring arrangements, and the possibility of juxtaposing different colours make it possible to create original compositions, while the application of the SNAP system elements enables using a single power supply service line to feed a few luminaires.

Focused lighting, diffused lighting for tables, display cases, hallways, restaurants, and offices.

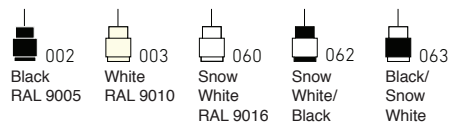

Installation Note:
Fixture includes Ø4" round backplate
